

Raffaele Farinaro

Senior Product Manager

Senior PM with 5+ years across product management and product engineering.

Expert in computer vision and GenAI, combining technical depth with commercial acumen.

I build the AI-native products I manage: agent skills, agentic pipelines, and the AI operating layer I run my own work on.

BSc: Engineering Physics

Politecnico di Milano (2013–2016)

MSc: Nano Optics and Photonics

Politecnico di Milano (2016–2018)

Machine Learning Foundations for Product Managers

Duke University (2024)

Agentic AI and AI Agents: A Primer for Leaders

Vanderbilt University (2025)

Experience

SCANDIT

Senior Product Manager

Scandit

May 2021 – Present

Zurich, Switzerland

- Scandit Agent Skills** (launched June 2026). Created and shipped ~80 published skills that AI coding agents use to integrate the SDK. 2,400+ installs across skills.sh, Cursor Marketplace, the ChatGPT/Codex directory, and the Claude marketplace. Wrote the launch post, ran enablement, tracked adoption weekly, and handle the partnerships process with those platforms. Presented at the company all-hands.
- AI Champion, product team.** Author of the AI-native SDK strategy (agents as the default path to integrate Scandit); now extending it to agentic licensing/signup and MCP. Internally: test AI tools, improve workflows, teach teammates, feed into the company's AI direction.
- SparkScan and Smart Label Capture.** Incubated SparkScan from hackathon idea to flagship product, adopted by Fortune 500 clients including Walmart. Took over Smart Label Capture, an underperforming OCR product, and reversed its trend through in-house AI improvements and API re-architecture for developer experience.
- Earlier:** multi-million Euro tender wins via technical proposals and tailored integrations; built the product analytics dashboard used across engineering and sales.

Side projects

upwordo

- Built an AI-powered language learning app; the content pipeline started manual, now runs fully agentic (drafts, grammar, images, podcasts, newsletters) with a publishing agent and human gates.
- Live and commercially viable, serving paying users and generating revenue.

upwordo.com

Ciaobot

- Local-first AI assistant and second brain I run my own work on: curated memory vault, scheduled agents, multi-model chats. Processes are specs, models are swappable.
- +100 active users

github.com/raffaelefarinaro/ciaobot

SquadraSmart

- Built a shift-scheduling SaaS for Italian emergency-response teams, with a rule-driven planning engine, request approvals, and Stripe billing.
- +50 paid users.

squadrasmart.weirdfisheslab.cloud

Fisici Senza Palestra

- Founded a scientific outreach community and blog, managing a team of authors.
- Achieved significant media visibility, featuring on VICE.com and national radio interviews for making complex science accessible to the public.
